# Sending a pull request

MAC | WINDOWS

When you're ready to propose changes to your project, you can open a pull request from GitHub Desktop.

After you [create a branch](#) and [commit some changes](#), you can open a pull request to get feedback on your proposed changes.

- 1

At the top of the app, click  **Pull request**.
- 2

In the *Title* field, type a descriptive title for your pull request.
- 3

In the *Description* field, type more information about the pull request, such as:

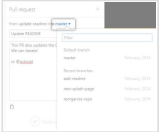

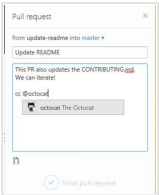

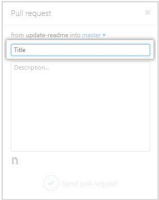

What's being updated

What kind of review you're looking for

People or teams who you want to notify about the pull request (via an @mention)
- 4

Optionally, above the *Title* field, change the compare branch. Automatically, the compare branch is set to the branch you're currently comparing against in GitHub Desktop's [comparison graph](#). Unless you manually change it, the comparison graph will compare your branch to the default branch in your repository.
- 5

At the bottom of the pull request pane, click **Send pull request**.

 **Contact a human**
